Actively Engaged Update

**All PPS Meeting
December 11, 2015**

December 2015

Discounted Targets

- Due to concerns raised on the counting of Actively Engaged Medicaid members, DOH is working to construct an approach to discount the Actively Engaged commitment targets for all PPS.
- Actively Engaged targets will be adjusted using a uniform approach that will involve applying a regional discount percentage to the PPS Actively Engaged commitment as a whole.
- The regional discount percentage will attempt to be a fair estimate of the amount of actively engaged overlap that is likely to exist on average for all projects and sites.
- DOH is working closely with HANYS and GNYHA on this issue and further guidance will be released as soon as its available.

Counting Actively Engaged

- PPS are reminded that counting of Actively Engaged should not reflect counting of the same Medicaid member by multiple PPS for the same project and provider.
- PPS are encouraged to work with any overlapping PPS to develop an approach for splitting the counts when there is overlap with projects and providers.
 - Due to the unique circumstances of PPS overlap, DOH encourages PPS to work on developing a local solution to this issue.
- DOH will soon be providing general guidance and suggested best practices on apportioning counts when PPS overlap to help PPS work through this issue.
 - This guidance will be applied in instances where the PPS are not able to arrive at an agreed upon approach for splitting Actively Engaged counts.
